About the relevant parties

About Walker Capital

Walker Capital provides wealth management advice and income-generating opportunities for individuals, wholesale clients and institutional investors. Founded in 2014, Walker Capital began offering managed account solutions in 2017.

Investment Process

Investment philosophy

Walker Capital strives to grow wealth utilising sound investment management skills, resources and research to build portfolios targeting risk utility along the efficient frontier. Walker Capital recognises that an optimal portfolio should meet both a return and risk objective. The portfolios align to this philosophy in three ways:

1. Walker Capital uses investment managers who have a competitive edge, can clearly articulate their investment beliefs and have the depth of resources to manage portfolios to deliver to stated objectives.
2. Diversification across investment strategies, asset and investment managers lead to more consistent investment outcomes. By investing in a mix of asset classes, strategies and managers, the effect of the ups and downs of each asset class's return is smoothed for the overall portfolio.
3. The portfolios may use benchmark unaware investment strategies that aim to specifically meet the return and risk objective of a model portfolio. For instance, portfolios with a focus on downside protection may lag the benchmark in strong bull markets, however outperform in down markets.

Strategic Asset Allocation

The SAA process begins with Walker Capital generating forecasted investment risk and return objectives for all relevant asset classes. Walker Capital will then look to allocate to each asset class in a manner that allows the portfolios to achieve the stated return, with a view to manage risk.

Once a baseline SAA is determined, Walker Capital will then conduct scenario analysis on the SAA using a range of different upside and downside macroeconomic themes or specific historic events such as the GFC. The results of the scenario analysis will help Walker Capital assess the potential impact on the expected risk and return properties of the portfolios, and adjustments will be made to the baseline SAA if required.

Security selection

The portfolios will look to select a few core positions comprised of ETFs, and surround that with managed funds to gain active exposure looking to generate outperformance.

Core positions will be selected based on Walker Capital's macroeconomic views and will serve as a low cost way to take certain thematic positions.

Majority of the portfolio will be exposed to managed funds. Walker Capital will adopt a quantitative approach to manager selection. The goal of selecting a portfolio of managers who can provide uncorrelated returns. Walker Capital will rely on various risk measures such as correlation co-efficient of the managers within the portfolio, Sortino ratios, maximum historical drawdowns.

The portfolios will also be supplemented by a few direct equity positions. Selection will be based on top down analysis and again rely on Walker Capital's macroeconomic views. The focus will be on selecting quality businesses which provide counter-cyclical exposure.

How the investment manager manages risk

The investment manager is unable to eliminate all investment risk, but does analyse, manage and aim to reduce the impact of risks by actively monitoring investment markets and portfolios and through the use of carefully considered investment guidelines.

Labour standards and environmental, social and ethical considerations

The Trustee does not take into account labour standards, environmental, social or ethical considerations when making the investments available. The approach in relation to any consideration of labour, environmental, social or ethical standards as part of the investment decision making process for the portfolio is left by the Trustee to the individual discretion of the investment manager. This investment strategy does not directly measure or incorporate labour, environmental, social or ethical standards as part of the investment decision-making process.

The investment manager is aware that these issues can influence social, business and investor outcomes. In certain circumstances they may consider these issues when making an investment decision. The investment manager's consideration of labour, environmental, social or ethical considerations are in its own right and not on behalf of the Trustee.

About the relevant parties

Execution of strategy

Mason Stevens Limited and its associated entities have been appointed by the Trustee to provide various services in relation to the Fund, including promoter, investment management and custody services. Mason Stevens and the Administrator are responsible for implementing the investment instructions of the investment manager by buying and selling assets, taking into consideration timing, trading costs (such as transaction fees and currency costs, if applicable) and the mandate of the portfolio. In certain circumstances Mason Stevens has the right to vary the Investment Option. By investing in this Investment Option, you instruct Mason Stevens and the Administrator to buy and sell assets on your behalf through the Investment Option as advised by the investment manager.

Risks

Before you consider investing in this portfolio, it's important you understand the risks that can affect your investments. A summary of key risks is in the PDS.

See the 'Risks' section in the PDS. Please note this is not an exhaustive list of all the risks. The risks relevant to this portfolio reflect the underlying investments. For information about risks regarding your personal situation, please speak to your adviser.

Trade notifications

When the investment manager trades, or rebalances the portfolios, Mason Stevens (through the Service) may send you an advice notifying you of the trades being undertaken. This is called a trade notification. The rebalance and reallocation of Investment Options may occur regularly and you may receive a trade notification each time a rebalance or reallocation occurs.
