

# Mason Stevens Wholesale Cash Enhanced Managed Portfolio

## Performance Report as at 31 July 2024

### Investment objective and strategy

The investment objective of the Managed Portfolio is to provide a return of 40-65 basis points p.a. above the Benchmark (after fees) over a 0+ years period.

The portfolio seeks to optimise running yield, with minimal credit, interest rate duration and credit spread duration risk; to generate superior risk adjusted returns, that are in line with the investment objectives.

### Portfolio performance as at 31 July 2024<sup>1</sup>

	1 month	3 months	6 months	Since inception (p.a.)
<b>Portfolio</b>	<b>0.43%</b>	<b>1.16%</b>	<b>2.44%</b>	<b>5.08%</b>
Benchmark	0.37%	1.10%	2.19%	4.32%
Excess Return	0.06%	0.06%	0.25%	0.77%

### Portfolio statistics and composition

### Performance since inception

Past performance is not a reliable indicator of future performance.

- <sup>1</sup> Benchmark is RBA Cash Rate. Returns are calculated net of management, performance, administration/custody and transaction fees, but excluding any adviser fees from the Managed Portfolio's inception date of 25/08/2023 and, assumes reinvestment of all income (but not franking credits). Where performance is greater than one year, performance returns are annualised. Returns are based on the theoretical performance of a portfolio which implemented the Managed Portfolio from the inception date, based on simplifying assumptions and security weightings. Actual individual returns of each client's portfolio will differ depending on factors such as date of initial investment, timing of transactions, contributions and withdrawals, fees and any customisations. Each client should also take into account their own taxation situations. All information provided in this report is correct as at the date of this report.
- <sup>2</sup> Yield to call is the estimated annual rate of return of a bond if held until its call date
- <sup>3</sup> Annual income on a bond divided by its current market value. Includes any applicable franking credits and expected cash distribution.
- <sup>4</sup> Average weighted length of time bond maturity or call date. As at the date of this report: weighted averages are based on current market prices and target portfolio weights. The portfolio is actively managed, and as such actual "outcomes will vary with changes made to positions in the portfolio, which may occur at any time. Portfolio statistics are for illustrative purposes only.

## Performance and portfolio overview

The portfolio returned 0.43% (after fees) during the month with long end rates dropping aggressively coupled with a mild tightening in credit spreads. The RBA remained on hold and again communicated a data dependent process, however in August it was a very close decision to raise. Although the RBA appears to be willing to look through short term fluctuations in inflation data, the last month's CPI release came close to tipping the scales towards a hike. RBA minutes most recently supported that view as timing in reaching their goal has been pushed out once again, albeit at the margin. Domestically, credit spreads were tighter at the margin. New issuance was strong for another month, with investors still keen to put cash to work.

The portfolio performed in line with expectations given its low volatility and carry was the main contributor to performance. The portfolio will continue to deliver strong carry with little volatility given its short duration and maturity focus. Interest rate duration was 0.08 with a weighted average credit duration of ~0.52 at the end of the month.

There were no trades through the month however the ANZ Tier 2 was called and fully repaid.

## Market outlook

Post month end there certainly has been some market volatility. The unexpected rate rise from the Bank of Japan and the subsequent sharp rise in the Japanese Yen (JPY)/US Dollar (USD) is causing a massive unwind of Yen carry trade positions, contributing to the sharp decline in US stocks and the biggest one-day decline in Japanese stocks since 1987.

For those who do not understand how this works, a brief explanation of the Yen carry trade is below:

- Many traders were borrowing JPY at low interest rates, converting them to USD and using this to buy US stocks and other risky assets globally.
- Now that the Bank of Japan (BOJ) is raising interest rates, the JPY has strengthened significantly against the USD, which increases the liability of those on the carry trade.

Now, these traders are getting hurt on several fronts. Not only must they pay higher interest for the JPY they borrowed, but the value of their debt has also increased, and they are facing material foreign exchange losses. The USD assets they are holding have further decreased in value and may not be enough to repay the JPY they have borrowed.

The other key data point causing consternation is the non-farm payroll data from the US and the resultant rise in the unemployment rate. At the heart of the concern is the idea that the Federal Reserve has made a policy mistake and could be too late and will need to start cutting aggressively to save the US economy from a hard landing. Economists globally are beginning to polarise again with some buying into the recession story, however others pointing out that one data point is insufficient and further data is required before making this assertion.

In our view, a balanced assessment of demand and supply suggests that we are, thus far, transitioning to slower growth rather than a recession. Barring some outside shock, the baseline scenario should be a slowdown scenario, even as volatile markets remind investors of the importance of diversifying and paying attention to valuations. The events of the last week remind us that the market is not the economy. Left field events can cause imbalance, which combines with fear and contagion risk to create dislocation.

## Key features

### Investment universe

Bonds (financial, government, corporates), Residential Backed Securities (RMBS), Asset Backed Securities (ABS), Floating Rate Notes (FRN), Major Bank T2 and Cash Deposits. Securities may be listed on an exchange or unlisted.

### Benchmark

RBA Cash Rate

### Target Return

RBA Cash Rate + 40-65 basis points, after fees

### Minimum number of investments

5

### Maximum number of investments

30

### Min investment

\$25,000 (or as agreed by the Investment-Sub Adviser)

### Suggested timeframe

0+ years

### Portfolio Manager

**Lloyd Mitchell** – Head of Fixed Income & Markets, Mason Stevens
