Mason Stevens Wholesale Cash Enhanced Managed Portfolio Performance Report as at 31 August 2024

Investment objective and strategy

The investment objective of the Managed Portfolio is to provide a return of 40-65 basis points p.a. above the Benchmark (after fees) over a 0+ years period.
The portfolio seeks to optimise running yield, with minimal credit, interest rate duration and credit spread duration risk; to generate superior risk adjusted returns, that are in line with the investment objectives.

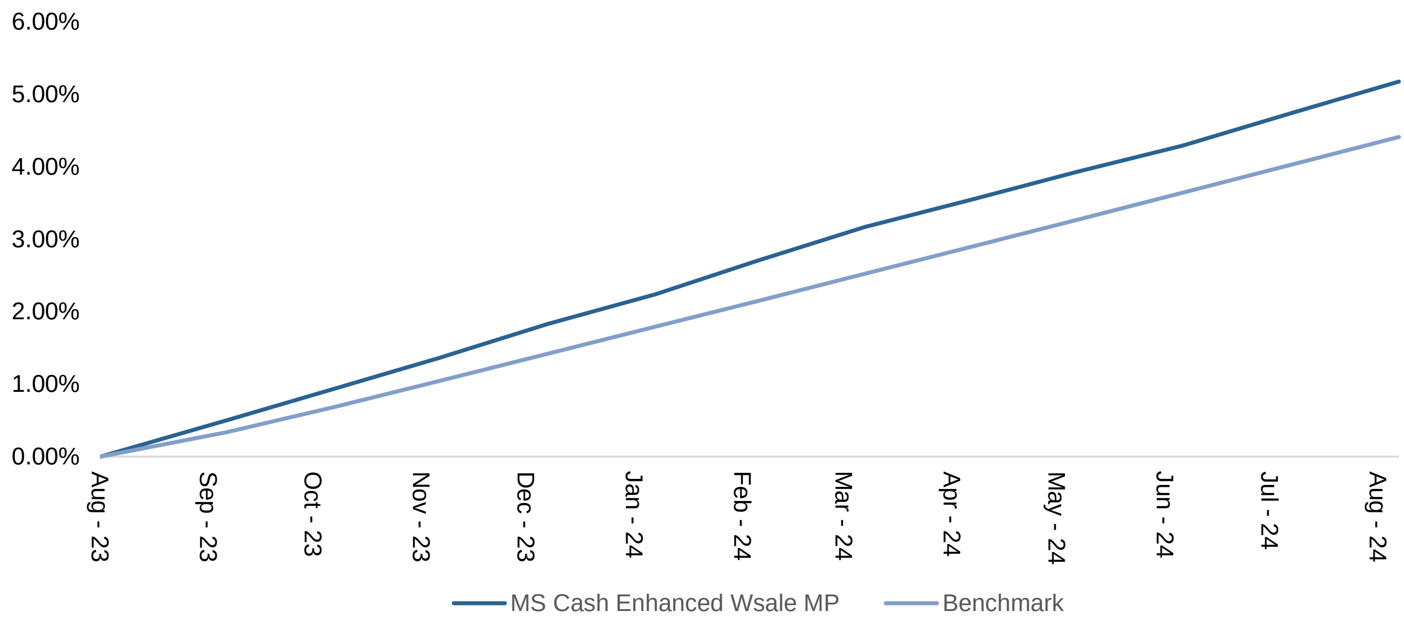
Performance since inception



Past performance is not a reliable indicator of future performance.

1 Benchmark is RBA Cash Rate. Returns are calculated net of management, performance, administration/custody and transaction fees, but excluding any adviser fees from the Managed Portfolio's inception date of 25/08/2023 and, assumes reinvestment of all income (but not franking credits). Where performance is greater than one year, performance returns are annualised. Returns are based on the theoretical performance of a portfolio which implemented the Managed Portfolio from the inception date, based on simplifying assumptions and security weightings. Actual individual returns of each client's portfolio will differ depending on factors such as date of initial investment, timing of transactions, contributions and withdrawals, fees and any customisations. Each client should also take into account their own taxation situations. All information provided in this report is correct as at the date of this report.

2 Yield to call is the estimated annual rate of return of a bond if held until its call date

3 Annual income on a bond divided by its current market value. Includes any applicable franking credits and expected cash distribution.

4 Average weighted length of time bond maturity or call date. As at the date of this report: weighted averages are based on current market prices and target portfolio weights. The portfolio is actively managed, and as such actual "outcomes will vary with changes made to positions in the portfolio, which may occur at any time. Portfolio statistics are for illustrative purposes only.

Performance and portfolio overview

The portfolio returned 0.42% (after fees) during the month with long end rates dropping aggressively coupled with a mild widening in credit spreads. The RBA remained on hold and again communicated a data dependent process, however in September it was more balanced between a hike and a cut, i.e. neither were on the table. Last month's CPI release provided much relief in turning back down, although on a core basis remains too high.

Domestically, credit spreads were wider at the margin. New issuance was strong for another month, with investors still keen to put cash to work.

The portfolio performed in line with expectations given its low volatility and carry was the main contributor to performance. The portfolio will continue to deliver good carry with little volatility given its short duration and maturity focus. Interest rate duration was 0.12 with a weighted average credit duration of ~0.72 at the end of the month.

There was a full capital call of the Westpac floater and the ANZ floater was partially sold down and replaced with stronger yielding short dated RMBS. This will help to provide a premium in yield without taking on much risk and benefit the portfolio going forward.

Key features

Investment universe	Bonds (financial, government, corporates), Residential Backed Securities (RMBS), Asset Backed Securities (ABS), Floating Rate Notes (FRN), Major Bank T2 and Cash Deposits. Securities may be listed on an exchange or unlisted.
Benchmark	RBA Cash Rate
Target Return	RBA Cash Rate + 40-65 basis points, after fees
Minimum number of investments	5
Maximum number of investments	30
Min investment	$25,000 (or as agreed by the Investment-Sub Adviser)
Suggested timeframe	0+ years
Portfolio Manager	**Lloyd Mitchell** – Head of Fixed Income & Markets, Mason Stevens
Portfolio management	The Managed Portfolio is managed by Mason Stevens Asset Management Pty Limited (MSAM) as Portfolio Manager. MSAM is part of the Mason Stevens group of companies.

Market outlook

The sharp correction in stocks in July/early August was due to several factors, with the most important one being softer-than-expected economic growth data that culminated in a weak employment report on August 2. In particular, the 0.2pp increase in the unemployment rate is what triggered the Sahm Rule and caused markets to worry again about a hard landing. Since then, we have received some better economic data led by jobless claims, retail sales and the ISM non-manufacturing survey (though some data has been softer, too). As a result, many equity market indices have rallied back to near all-time highs, while the bond market, yen and commodities reflect lingering suspicions that the coast might not be clear. Even equity market "internals" like cyclical versus defensive stocks have failed to rebound much at all, while lower-beta stocks continue to show very resilient performance amid the mixed data on both the macroeconomic and microeconomic fronts.

Over the past month, it has become clear that inflation is no longer the only risk on the Fed's radar. Confidence in the disinflation progress has increased, with personal consumption expenditures (PCE) inflation now under 3%. However, concerns about downside labour market risks have grown following the softer-than-expected July jobs data. The Fed seems intent on keeping the "soft landing" as was evident in the last Fed meeting where they reduced rates by 50bp and maintained reasonably healthy economic and labour market forecasts. If the labour market continues to hold up rather than collapse, rate cuts should be seen as "normalising" rather than "easing."

The challenge for credit investors is that markets are trading near spread tights, however investors still see value in carry across investment grade and high yield. With downside risk if growth falters, there is a lot riding on upcoming labour reports. However for now job losses and claims remain well contained. Similarly in Australia although GDP per capita is negative (and weaker versus the US), the jobs market is still well above pre-COVID levels.

This is very different than the corrections we experienced in 2022 and most of 2023 when inflation, rather than growth, was the main risk for risky assets. In a late-cycle, soft-landing outcome in which the Fed is cutting rates due to growth concerns and relative labour market weakness, quality credit will be a good place to be. In Australia the core inflation task is far from over, however rates can be seen as getting cut in potentially six or more months' time. Credit spread relative value is similarly rich in Australia and a more selective approach is probably more appropriate now than over the last one to two years both here and the US.

The Managed Portfolio is managed by Mason Stevens Asset Management Pty Limited (MSAM) ABN 92 141 447 654, as the Investment Sub- Adviser. MSAM is a Corporate Authorised Representative (CAR 461312) of Mason Stevens Limited. Investment decisions are governed by an Investment Committee that ensures the appropriate discipline and rigour is applied to the investment process.

More information
